“Where Does the Tide Roll? The Causes and Consequences of Out-of-State Enrollment at Public Flagships,” with Ryan Haygood

Abstract: Between 2002 and 2022, the average share of out-of-state enrollment among first-year students at US public flagship universities rose by 50%. Using a combination of novel data sources at institution, municipality, and individual levels, we present evidence that this rise in non-resident enrollment is driven by university recruitment efforts and concentrated among out-of-state students from households in high-income locations. After linking twenty years of commencement records from a large public flagship to graduate work histories, we exploit plausibly exogenous across-cohort variation in state-level enrollment shares to show that each 1 percentage point increase in out-of-state enrollment increases in-state students' out-migration rate by 0.33 percentage points. Despite this spillover effect on student migration, we find that out-of-state students more than pay for themselves through tuition and future income tax revenues paid to the college-going state: enrolling an additional out-of-state student delivers a lifetime state budget surplus of more than \$36k.
